

2_26 ASYMMETRICAL SHLD/C&G TYPICALS TEMPLATES

Question:

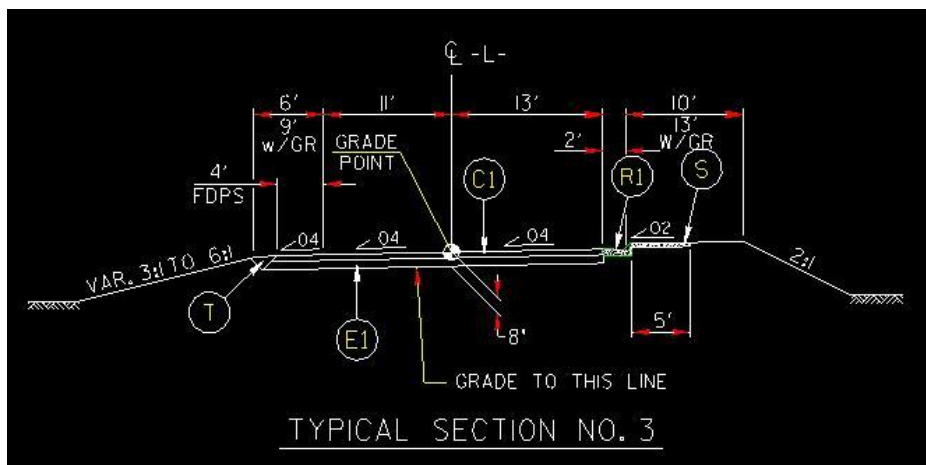

I have a bridge project with a curb and gutter on one side and a shoulder section on the other. Is there template we can use in our standard library?

Answer:

Two new asymmetrical shoulder/curb and gutter typical templates have been created. They can be found under the RDY Standard template library, Department Standards >>> Road >>> Asymmetrical Shld / C&G Typical's folder.

These templates satisfied the below typical section (in addition to sidewalks and driveways).

For further instructions on how to customize the templates for independent asymmetrical controls using parametric constraints (such as widening the lane width 11' on the left side and 13' on the right side of the road), see Exercise 6: Customize Template in Chapter 3 of Training Exercises.
